Centralize alerts and notify the right people at the right time

With deep integrations into monitoring, ticketing, and chat tools, Opsgenie groups alerts, filters out the noise, and notifies you using multiple channels, providing the necessary information for your team to begin immediate resolution.
Atlassian Opsgenie

Build and modify on-call schedules with ease
Build and modify schedules and define escalation rules within one interface. Your team will always know who is on-call and accountable during incidents and have the confidence that critical alerts will always be acknowledged.

Gain valuable on-call insights
Gain insights into areas of success and areas for improvement in your on-call and alerting processes. Use powerful reporting and analytics to reveal the source of most alerts, your team's performance in acknowledging and resolving, and how on-call workloads are distributed.
Centralize alerts with 200+ integrations

Opsgenie integrates with hundreds of the best monitoring, workflow, and collaboration tools. Paired with a flexible rules engine, Opsgenie notifies the right people on-call, enabling them to take rapid action.
